

Is your software safe:

Payment applications must not retain full magnetic stripe data or CVV2 data and must support a merchant's and service provider's ability to comply with the PCI Data Security Standard. Acquirers are responsible for ensuring that their merchants and service providers validate the security of their payment applications using the "Payment Application Best Practices".

If you designed your own website, payment application or shopping cart you must evaluate your work against the PA-DSS requirements to confirm that your payment application is within the PA-DSS standards.
